

# User Guide

ReferIO has only one simple command: `/refer [my|new|clear|key]`.

## You want to invite someone

Just use `/refer` or `/refer new`. If all works fine you'll get this response:

```
Referral added. Give this hash to your friend: AABBC
```

Depending on the server settings you might get:

```
Maximum pending referrals reached!
```

That means that you'll either have to wait until one of your keys will be used or you can clear the pending requests with `/refer clear`.

You can check all your referrals with `/refer my`

## You want to use a key

Just use `/refer <your hash>` to use your key and you're done. After that a time counter starts and checks for your playtime. If you have played long enough the rewards will be unlocked.

You can check your time counter with `/refer my`
