

# RestrictIO command

You can manage the bans over the console with the `/rio` commands.

Unfortunately you can't edit a ban over console - you have to remove the old and recreate it. Alternatively you can edit a ban with the ingame GUI or by editing the file.

## Adding a ban

```
/rio ban <critierias> <actions> <triggers>
```

- Criterias:  
`none` or a comma-separated list of criterias (see [criteria list](#))
- Actions:  
`none` or a comma-separated list of actions (see [action list](#))
- Triggers:  
`none` or `all` or a comma-separated list of triggers (see [trigger list](#))

If you want to use spaces in strings like in the Message action, use underscores instead of spaces!  
If you explicitly want to use underscores, escape them with a backslashes.

## Examples:

```
rio ban ID(minecraft:wool),meta(12) remove(),Message(This_is_banned!!!) all
```

removes brown wool and gives a message at all incidents.

```
rio ban mod(minecraft) none blockbreak,blockplace
```

blocks any block break or place without any other action

## Removing a ban

`rio unban <index>` removes a ban entry of the ban list at the specified index. You can obtain the index with `/rio list`. Note that if you want to delete several entries, the index may be moved.
